# HomelyHub app using MERN Stack

HomelyHub is a platform that lets people find and book unique places to stay while traveling. Whether it's a cozy home or a fancy villa, or room, you can experience a personalized stay. Hosts can also earn money by sharing their spaces. so, Explore the world with HomelyHub for a unique and comfy adventure!"

## **Architecture:**

The HomelyHub project using the MERN (MongoDB, Express.js, React, Node.js) stack is designed to replicate the core functionalities of the Airbnb platform. The architecture comprises a MongoDB database to store property and user data, while Express.js handles server-side logic and API endpoints. React is employed for building the user interface, providing a dynamic and responsive experience for property listings and bookings. Node.js serves as the runtime environment for server-side execution, ensuring seamless communication between the front and back ends. The project follows a modular structure, with components for user authentication, property search, and booking features. Redux is integrated for efficient state management, enabling a smooth flow of data within the application. Additionally, the project employs RESTful API principles to facilitate communication between the client and server, ensuring a scalable and maintainable codebase.

## **Features:**

- <u>User Authentication:</u> Allow users to sign up, login, and manage their profiles i.e., update users profile and password.
- <u>Search and Filters:</u> Implement a search feature with filters to enable users to easily find properties based on location, dates, pricing, and amenities, enhancing the overall user experience.
- <u>View Listings:</u> Users can view detailed information about each accommodation, including photos, descriptions, amenities.
- **Property Listings:** Allow property owners to list their accommodations, providing details such as images, descriptions, amenities, and pricing, etc.
- **Booking System:** Develop a booking system that allows users to select desired dates, view pricing, and confirm reservations, with real-time updates on availability and booking status.
- <u>User Profiles:</u> Implement user profiles where individuals can manage their bookings, update personal information, and track their property listing activity.

- <u>Payment Integration</u>: Integrate a secure payment gateway to handle transactions, allowing users to make reservations and property owners to receive payments seamlessly.
- **Responsive Design:** Ensure a responsive and visually appealing design that adapts to various devices, providing a consistent and user-friendly experience on both desktop and mobile platforms.
